

ECGPT PRIVATE AI APPLIANCE

Private AI that lives in your office.

A customer-owned AI system installed at your location, configured for your organization, and ready for your team to use.

You purchase and own the appliance. ECG commissions it onsite using the custom **ECGPT wizard**, with your local administrator at the keyboard.

The box is the hardware. The ECGPT wizard turns it into your private AI appliance.

What you get

HARDENED SYSTEM

Configured and secured for its role inside your organization.

LOCAL AI MODEL

Runs on the appliance at your location, not on a shared public AI service.

SECURE PRIVATE CHAT

Your team signs in through a familiar private web address.

KNOWLEDGE VAULT

Approved company information is organized for private search and use.

BACKUP LOCATION

Your administrator chooses where the vault is backed up.

TRAINED ADMINISTRATOR

Hands-on training and a clear operating handoff.

How it works

1

Talk. We discuss what you want AI to help with and whether the standard appliance fits.

2

Buy. You purchase the appliance through ECG and own the equipment.

3

Commission. Your administrator runs the ECGPT wizard onsite with ECG beside them.

4

Use. We test the finished system, train your administrator, and hand it over.

STANDARD FIT

Compact Strix Halo platform with up to 128GB of unified memory.

Designed for private document questions, drafting, research, and knowledge work in a normal office.

NEED MORE THAN 128GB?

The conversation becomes more detailed. ECG reviews the actual workload and designs the right solution with you instead of pushing a generic bigger box.

THE BASIC ENGAGEMENT

Customer-owned appliance | Required onsite wizard commissioning and administrator training | Agreed extras as needed | Optional ongoing support

Start with a conversation.

Tell Chris what you want ECGPT to help with. ECG will tell you whether the standard appliance fits or the need calls for a custom design.
